

CUT VINYL LETTERING

Design

We either produce a layout based on your measurements and photos or we follow your designer's specifications.

Production

We cut your vector format layout on our wide format plotter in the appropriate adhesive-backed vinyl for the job. We either choose from one of our in stock factory produced vinyls or we print to match your pantone colors. We can produce the graphics direct for first surface or we can mirror cut for the inside second surface of glass. We can also print and cut from your file including photos with cut mask lines. After printing and cutting we "weed" the excess vinyl away. Finally we tape it with a low-tac transfer tape which holds the cut shapes in relation to each other for application.

Professional Installation

We measure, level, and tape and hinge the vinyl with it on its paper backer. Then fold it back on the hinge, remove the backing paper and squeegee it into place.
