

Sign Fabrication

Wood

We have a full woodshop, and a skilled team of craftsmen to build anything you need. See our work for Whole Foods Market for examples

Metal

We work with metal as needed creating custom hardware, steel frames, or magnetic receptive surfaces. We also specialize in waterjet cut dimensional letters in stainless steel, aluminum, brass or any other material.

Plexiglass

Plexiglass is most often used for dimensional letters and sign faces. We can custom rout or laser cut your custom shapes and finish to your specifications with paint, digitally printed vinyl, or backlit duratrans films.

Foam

We use high density foam for dimensional signs and lettering. HDF is good for under-lit letters which have a backglow, sandblasted sign faces and more.

Electrical

We make all kinds of lit signage using all types of lighting as suits the project. We print duratrans faces for static or changing signs and frames.

Installation and Servicing

We professionally install and service most signage.
