

WIDE FORMAT PRINTING

Design

We create or adapt layouts from your files including photos, logos and text. We work with you to find the best materials and processes for your specific needs.

Pre-press/ Proofing

Working from your files we check resolution and make sure colors match your expectations as close as possible.

Production

We print on one of our high resolution wide format printers. We can print on a wide array of materials from most types of vinyl to duratrans film to canvas. We print up to 60" wide in house in 6 color process at up to 1200dpi. We have both solvent (water-proof) and dye ink printers. We also offer laminates in gloss, matte, or satin for protection from abrasion, the elements, or vandalism/ graffiti. We also have sources for direct to wood printing and grand format printing at competitive prices.

Professional Installation

For adhesive-backed vinyl prints, we measure, level, tape and hinge the print with it on its paper backer. Then fold it back on the hinge, remove the backing paper and squeegee it into place. (as shown below) For other types of prints we install as the job requires with the best tools and materials for the job. See the photos on following pages for an idea of what we can do.
